

Given two string arrays word1 and word2, return true if the two arrays represent the same string, and false otherwise.

A string is represented by an array if the array elements concatenated in order forms the string.

Input: word1 = ["ab", "c"], word2 = ["a", "bc"]

Output: true

Explanation:

word1 represents string "ab" + "c" -> "abc"

word2 represents string "a" + "bc" -> "abc"

The strings are the same, so return true.

Input: word1 = ["a", "cb"], word2 = ["ab", "c"]

Output: false

Input: word1 = ["abc", "d", "defg"], word2 = ["abcddefg"]

Output: true
